

Reduce from days to minutes the time needed to collect complete credentialing applications from your providers. ApplySmart's flexible design allows you to specify all of your organization's unique application requirements, including credentials documentation and required forms.

How do you process applications?

Pick any of these three ways:

applySMART

applySMART is "Plug & Play!" You do not need to use our credentialing software to process applications through applySMART.

credSMART

Receive files seamlessly into your credSMART system

Your Current Software System

Import data to your credentialing system

Application PDF Download

Download complete application packets from your secure account

How does applySMART work?

1. You set your application requirements

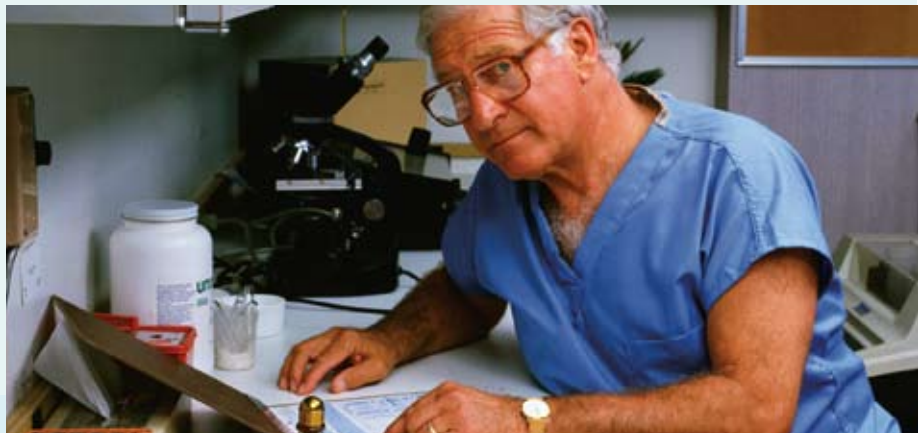

Through applySMART's self-service portal, you specify the data, documentation and forms required for a complete application.

3. applySMART audits providers applications for completeness

applySMART's audit function will inform providers of all missing application requirements – only complete applications will reach your in-box for review!

2. Providers complete their applications on-line

Providers log-in to their applySMART accounts and fill-out their applications according to your organization's requirements.

smartSOURCE

Remember, you can include smartSOURCE Primary Source Data with your Application Data Stream!

Receive and Verify Applications in Seconds!
